eResearch Australasia 2026 · Lightning talk

One codebase, four front doors

How we try to keep our research tool going

to more researchers · on more platforms · for longer

Dr Chao Sun

Wordflow

LDaCA's open-source, **point-and-click text analytics** platform: built so researchers can analyse language data without writing code.

One tool, many kinds of researcher

New ideas
Wants to try it in five minutes

Teaching
A class of 30, one afternoon

Private data
Cannot upload to a server

Big corpus
Needs far more compute

No budget
Cannot pay for hosting

Not a coder
Point and click, nothing else

Hot desking
Any machine, resume anywhere

How do we serve more researchers, with more needs, on the resources we have, now and after the project ends?

LDaCA

The same tool, four ways in

One codebase · one identical interface

Work saved behind one door opens behind any other

On-demand web host

ARDC BinderHub

Repurposed, not a standing server. Nothing to install; scales up for a class, then back to zero.

Standing web host

Nectar · HPC

Resume work from any machine. Big corpora on compute we already have.

Desktop app

Windows · macOS

Sensitive data never leaves the machine. Offline. Compute scales with your own hardware.

Python package

PyPI · GitHub repo

For people who code: pip install it, script it, read the source, run it on your own servers.

LDaCA

Why it helps us keep going

Heavy and private work moves to the researcher's own device.

Shared infrastructure serves more users with the same resources.

The extra cost, paid once: an architecture that adapts one codebase to every environment, and a release pipeline that builds all four doors from it.

Uptake so far

Five months of public releases

450+

desktop downloads, Windows and macOS

39

releases since May 2026, each with a DOI

225

registrants across 6 workshops since April

10+

app launches a day, rough average*

19

countries reached by one online workshop

100+

pieces of user feedback since June

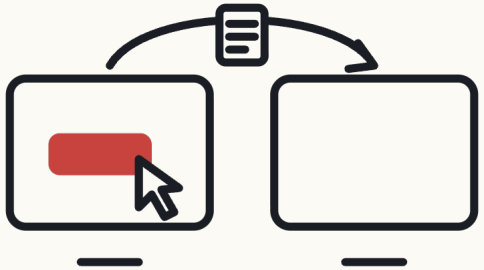

276

views of the workshop recordings

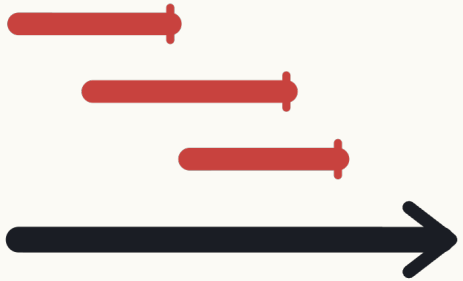

Figures as of 27 October 2026. *Launch counting is approximate and only began in mid-October.

What guided our choices

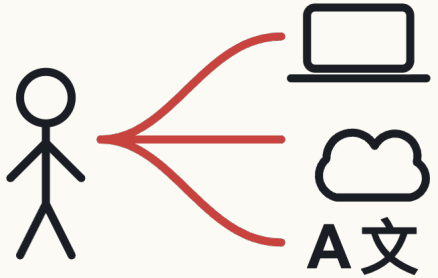

Four ideas we built around

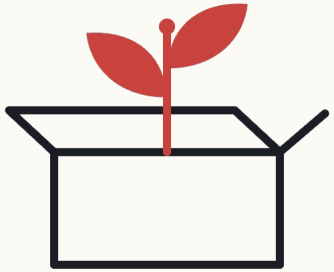

Usability and portability

Infrastructure that outlives projects

Diverse needs, the user's choice

Open, FAIR and CARE

Where we are

Our attempt to serve more researchers as a small team

We are new and cannot promise this is the right way, but it is why we built it like this. If you are in a similar position, we hope it helps.

All four doors from one landing page · DOI 10.5281/zenodo.20408328
